

APOS Intelligent Data Access Controller (IDAC)

Know Who Is Doing What, Where and When

Monitor:

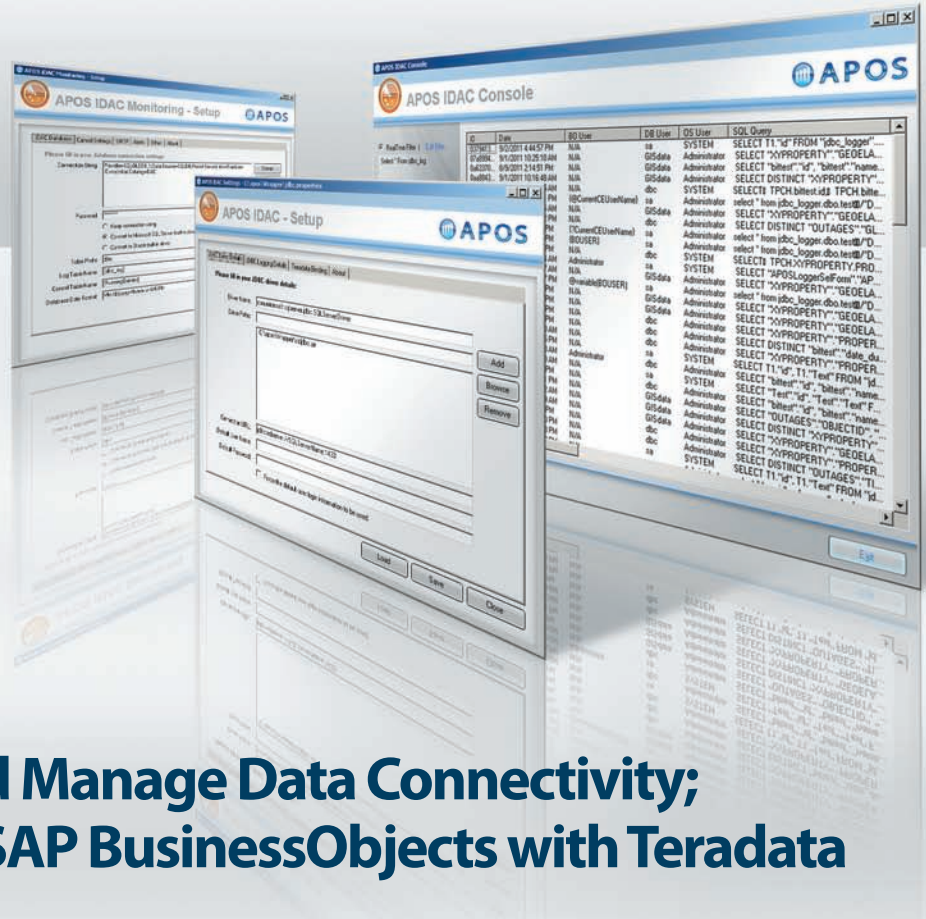

- Real-time tracking of BI queries
- Automatic alerting (thresholds exceeded)
- Automatic cancelling of runaway queries

Manage:

- BI query auditing
- Query intervention
- Data access control - security, compliance, content promotion

Integrate:

- Enhanced, automated banding support
- Enhanced datatype support
- Enhanced BI access to Teradata functions
- Enhanced temporal support

Monitor and Manage Data Connectivity; Tightly Integrate SAP BusinessObjects with Teradata

IDAC provides the information you need to understand your BI data connectivity, to manage query processes effectively, and to increase the efficiency of your BI and data solutions.

The multi-threaded Intelligent Data Access Controller logs BI query metadata to achieve tight integration between SAP BusinessObjects and numerous datasources. IDAC lets you know who is doing what, where and when. You can actively monitor queries and cancel remotely. You can set up automatic monitoring and query cancellation based on thresholds. Teradata users can use IDAC to leverage Query Banding and temporal datatypes and functions to realize the full benefits of Teradata dynamic workload management with SAP BusinessObjects.

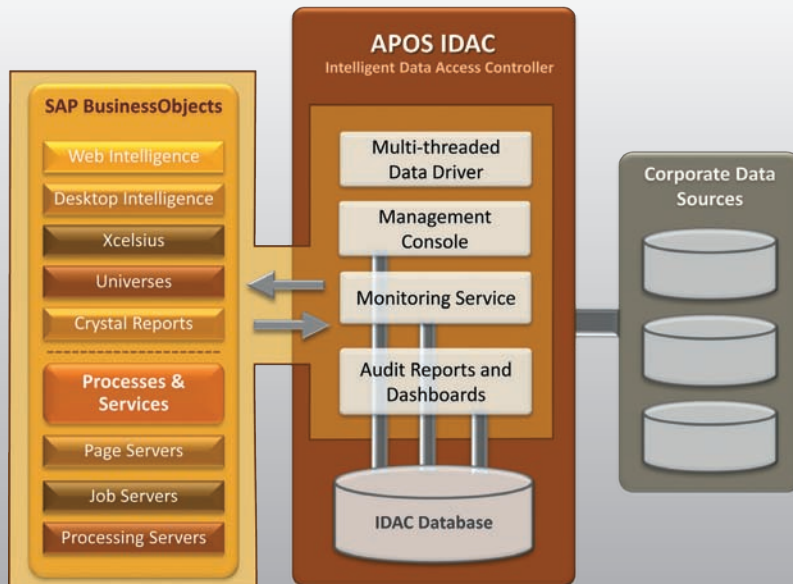

Well Managed BI

Teradata Value

Teradata enterprises can use IDAC Premium to leverage Query Banding and temporal datatypes and functions to realize the full benefits of Teradata dynamic workload management with SAP BusinessObjects. You get:

- Automatic query banding
- Remote and automated query cancelling
- Simplified access to enhanced Teradata functions
- Temporal and geospatial data handling
- Improved regulatory compliance and lifecycle management

Teradata and SAP have partnered since 1998 to integrate Teradata's Enterprise Data Warehouse (EDW) technology and SAP BusinessObjects Business Intelligence (BI) technology. This partnership links two advanced technologies to provide smarter, faster, and enterprise wide business intelligence. APOS IDAC Premium complements this partnership and delivers even stronger integration to yield better analysis, improved efficiencies, and well managed BI.

Since its beginning in 1992, APOS Systems has evolved from a custom business application development shop to a global provider of solutions promoting well managed business intelligence. APOS solutions improve your return on your BI investment through:

BI platform management – automating and simplifying the administration, auditing and monitoring of your BI platform, providing robust document instance and object archive and restore capabilities, enabling tightly controlled document production, publishing and distribution workflows, and promoting agile BI practices.

Location intelligence – full bi-directional integration between business intelligence and geospatial data, improving comprehension and communication, and enhancing decision-making workflows through advanced data visualization.

APOS solutions simplify, automate, complement, enhance and extend BI practices, and focus BI processes for greater agility in your organization's decision-making capabilities.
