

APOS Data Gateway Solutions for SAP Lumira Design Studio Are Now SAP Certified

FOR IMMEDIATE RELEASE

Kitchener, ON, June 2, 2016 - APOS Systems Inc., a leading provider of well managed business intelligence (BI) solutions for SAP BusinessObjects, is proud to announce that two of its solutions are now SAP-certified and available on the [SAP Analytics Extensions Directory](#). The two solutions are the APOS Data Gateway, Lumira Edition, and the APOS Data Gateway, Design Studio Edition.

The [APOS Data Gateway, Lumira Edition](#), allows SAP Lumira users to connect to Web Intelligence reports, as well as to any relational data sources, and use them as data sources for their Lumira projects. [The APOS Data Gateway, Design Studio Edition](#), allows SAP Design Studio users to connect to Web Intelligence reports as a data source for their Design Studio projects, and to expand data connection options and data volume. By using a Web Intelligence report as a data source, the Lumira or Design Studio project can inherit the report's data connection options, such as UNV, HANA, UNX and BEx, as well as inherit the report's Web Intelligence calculation engine, or inherit a Web Intelligence instance's pre-loaded and pre-calculated data.

These two newly certified solutions join a number of other APOS solutions available at the SAP Analytics Extensions Directory. The Directory provides access to the full range of extensions built by SAP partners to help SAP Analytics customers fill any gaps in their SAP Analytics requirements.

"The SAP Analytics Extensions Directory is a valuable resource for SAP BusinessObjects users," said Allan Pym, APOS COO. "We are pleased to be able to offer these two SAP-certified APOS Data Gateway solutions at the Directory. The APOS Data Gateway helps these users to simplify data access for their Lumira and Design Studio projects, and to expand the sources and volume of data they can use with their projects."
