

APOS Data Gateway for SAP® Lumira

FOR IMMEDIATE RELEASE

Kitchener, ON, June 3, 2015- APOS Systems Inc., a leading provider of well managed business intelligence (BI) solutions for use with SAP® BusinessObjects™ BI software, announces its new APOS Data Gateway for SAP Lumira. The APOS Data Gateway is currently available in two editions:

- APOS Data Gateway, Lumira Desktop Edition for Web Intelligence
- APOS Data Gateway, Lumira Desktop Edition for Microsoft Access

Using these editions of the APOS Data Gateway, Lumira users can connect Lumira to alternative data sources, including SAP BusinessObjects Web Intelligence reports and Microsoft Access databases.

"The APOS Data Gateway helps companies leverage their trusted data and data connection assets, which delivers very unique value" said Allan Pym, APOS COO. "This product fits strongly with the SAP BI Convergence strategy, and greatly speeds the time to value."

SAP's BI Convergence Strategy aims to simplify and unify the SAP BusinessObjects BI portfolio while easing the path to adoption of new technology. The APOS Data Gateway aids in convergence by making more data sources and existing business logic assets more easily available.

These initial editions of the Data Gateway allow organizations to leverage the reach and business logic of Web Intelligence reports and instances, as well as the tables and queries in Microsoft Access. Future editions of the APOS Data Gateway will include a Server edition for Lumira, and a Server edition for Design Studio. These Server editions will open up even more data connection options, and help to optimize data throughput and maximize access to content on the SAP BI platform.

"The APOS Data Gateway is a logical extension of our mission to provide organizations using SAP BusinessObjects with the means to optimize their BI deployment and realize stronger ROI on their BI investment more quickly," said Pym.

About APOS Systems

Formed in 1992, APOS Systems is a global provider of solutions which enable well managed business intelligence. APOS solutions improve the return on BI investment through enhanced BI platform management, providing: automated and simplified administration; detailed platform auditing and monitoring; robust archive, backup and restore capabilities; enhanced content publishing and distribution; detailed BI query awareness and controls; and targeted solutions to

speed and streamline platform migration and technology adoption. APOS solutions simplify, automate, complement and extend your BI platform management practices.
