Dashboard Auditor for SAP BusinessObjects

FOR IMMEDIATE RELEASE

Dallas/Fort Worth, TX, September 22, 2014 - APOS Systems Inc., a leading provider of well managed business intelligence (BI) solutions for SAP BusinessObjects, announces its new Dashboard Auditor for SAP BusinessObjects Dashboards (Xcelsius) and Design Studio. The Dashboard Auditor provides both usage and functional auditing, giving you the flexibility to build complex auditing schemes to measure user behavior on your dashboards.

"Dashboards are an increasingly important means of delivering business intelligence. Companies are investing substantial sums in dashboard development and want to know how effective they are in delivering that information, and how dashboards can be improved to meet user requirements and expectations," said Allan Pym, APOS COO. "Knowing how the dashboard is being used will help our customers improve design and increase user adoption."

Using the APOS Dashboard Auditor, you can audit Xcelsius and Design Studio dashboards, as well as Xcelsius components streamed into Design Studio using APOS Dashboard Migrator. Usage auditing lets you know who is using your dashboards, where and when. Functional auditing tells you how your dashboards are being used.

"The APOS Dashboard Auditor is a perfect companion to the APOS Dashboard Migrator," said Ofir Gil, APOS CTO. "Both are ideal for organizations that are in the process of moving from Xcelsius to Design Studio. If you are using APOS Dashboard Migrator to include Xcelsius dashboards and components in your Design Studio projects, you can use APOS Dashboard Auditor to measure usage in both simultaneously."
