APOS Dashboard Migrator for SAP® BusinessObjects™ Design Studio

FOR IMMEDIATE RELEASE

Orlando, FL, March 26, 2014- APOS Systems Inc., a leading provider of well managed business intelligence (BI) solutions for use with SAP® BusinessObjects™ BI software, announced its new APOS Dashboard Migrator for SAP BusinessObjects Design Studio. The APOS Dashboard Migrator is an add-on to SAP BusinessObjects Design Studio 4.1 that enables people to leverage the existing dashboards they developed using SAP BusinessObjects Dashboards software (formerly known as Xcelsius® software) and to use them in the new release 4.1 of the design studio. Using the APOS Dashboard Migrator, dashboard developers can embed dashboard add-on components and complete dashboards in their design studio projects.

"The migration process can present many obstacles to productivity," said Allan Pym, APOS COO. "The APOS Dashboard Migrator is one of a set of products we have developed to help BI platform managers, administrators and users become productive as quickly as possible in the latest BI environment from SAP."

The APOS Dashboard Migrator facilitates the migration process by allowing organizations that migrate to SAP BusinessObjects Design Studio to leverage in this new environment their existing dashboard components and dashboardsfrom SAP BusinessObjects Dashboards. The migrator helps platform managers manage their migration timelines and dashboard design resources more effectively. It also can potentially allow them to use with the new design studio many third-party extensions that were designed for use with SAP BusinessObjects Dashboards .

The initial release of the APOS Dashboard Migrator delivers dashboards to SAP BusinessObjects Design Studio in HTML5 format, and the design studio can pass parameters to SAP BusinessObjects Dashboards to determine context and content. Dashboards can access data via UNX universe or Query as a Web Service (QaaWS).

APOS CTO Ofir Gil noted: "Upcoming releases of the APOS Dashboard Migrator are planned to include support for dashboards in SWF format, bidirectional parameters, and enhanced data transfer."
