- License and Session
- User Activity
- Report and Dashboard Usage Pattern

System Change Auditing

- Report structure changes
- Universe structure changes
- Security changes

Impact Analysis

- Reports, universe, business views
- Epic Upgrades

BI Platform Monitoring

- Processes and services
- Schedule and Instances
- Performance and functional monitoring

Operating Enviroment Monitoring

- Memory, CPU
- Event Log
- Database
- Website

APOS

Well Managed BI

Detailed System Metadata Management & System Monitoring for Effective SAP BI Management

Maintaining the integrity of your SAP BusinessObjects environment and infrastructure is critical.

The APOS Insight solution provides the system metrics, impact analysis, performance analytics, and many other capabilities you need to optimize your BI environment and infrastructure, to establish complete confidence in your content, and to ensure industry-specific regulatory compliance.

Because APOS Insight tracks SAP BusinessObjects from outside the system, using both statistical and functional server analysis, you can count on it to provide a consistent, reliable, and deep view of your system's health.

APOS Insight's enhanced metadata management, predictive system analytics and failure prevention, and threshold-based alerts help you to streamline administrative and management processes and to sustain infrastructure and content reliability. Achieve deep system visibility, superior system tuning and optimization, and maximum availability with APOS Insight.

APOS Insight

Deep BI System Knowledge

APOS Insight -Delivering Well Managed BI

Meet the BI information, governance and compliance needs of stakeholders across your organization through:

- **Impact Analysis -** know which reports will be affected by changes to database fields, universes, etc.

- **Security Structure Management -** identify vulnerabilities and manage organizational change.

- **Intelligent Alerts -** configure alerts to be triggered by metadata audit information

- **Functional System Monitoring -** improve response times and SLA compliance

- **Change Management -** support your organization's internal governance processes and workflows.

- **License Management -**employ usage analysis to optimize license distribution.

- **System Resource Management -** identify and resolve system bottlenecks and inefficiencies.

- **System Planning -** optimize system growth while reducing technical debt.

- **Report Catalogs and Documentation -** automate report inventory and documentation generation for efficient content management and migration and upgrade planning.

- **Web Application Server Audit -** use real-time monitoring and historical audit to gain granular visibility into user activities.

- **Real-Time Access to CMS Data -** configure dashboards and reports to display live data from CMS tables for accurate system status information.

- **Offline Historical Analysis -** record information about transactions against, and the occurrence of changes to, SAP BI objects, including reports, universes, security and Analysis for Office.

- **Multi-Tenancy Support -** audit report usage metadata for tenants for efficient system planning and management, and accurate chargebacks.

- **Financial Reporting & Audit -** achieve financial reporting compliance and internal control governance.

- **EHR Upgrades -** increase the speed and accuracy of upgrade rollouts.

Tailored APOS Insight Solution Packages

APOS Insight's modular construction means flexible deployment to meet your specific well managed BI needs. We can tailor a solution package to give you the deep visibility you need to optimize your SAP BusinessObjects environment and infrastructure.

Formed in 1992, APOS Systems is a global provider of solutions which enable well managed business intelligence.

APOS solutions improve the return on your BI investment through enhanced BI platform management, providing: automated and simplified administration; detailed platform auditing and monitoring; robust archive, backup and restore capabilities; automated report testing; enhanced content publishing and distribution; detailed BI query awareness and controls; simplified enterprise data connectivity; and targeted solutions to speed and streamline your platform migrations.

APOS solutions simplify, automate, complement and extend your BI platform management practices.
