# APOS Publisher

Execute tightly controlled document production, publishing and distribution workflows

- **Advanced bursting engine**
- **Atuomated document production**
- **Workflow monitoring, alerts and auditing**
- **Interactive process control**
- **Assured delivery to external devices, auto recovery, partial burst reruns**
- **Enhanced distribution, encryption & integration**

APOS Publisher is a complete SAP BusinessObjects publishing solution, providing robust bursting management, post-processing distribution service, report package management, and assured delivery to extend SAP BusinessObjects capabilities. Publisher automates these tasks while providing personalized reporting to your information consumers.

SAP BusinessObjects platform managers and technologists value the flexibility and agility that Publisher's custom properties, flags and settings add to their scheduling, bursting and distribution efforts, and the ability to zip and encrypt reports.

CIOs use Publisher to leverage their BI investment as a replacement for legacy information delivery systems, improving both performance and ROI.

Well Managed BI

APOS Publisher

Execute tightly controlled document production, publishing and distribution workflows

Advanced bursting engine
- Burst in queues or batches
- Operate multiple bursting queues in parallel
- Structure and control bursting jobs with request hierarchy within batches, collections, and projects

Automated document production
- Centralized document generation
- Create collecgtion execution workflows
- Send to AFP printers

Workflow monitoring, alerts and auditing
- Monitor requests within batches, collections, and projects
- Receive alerts when errors occur, when batches, collections and projects are closed
- Trigger reports at the end of the bursting process to list full status of batches, collections and projects

Interactive process control
- Exercise complete control over document production workflows within SAP BusinessObjects.
- View queues, collections, batches, projects and requests as they execute
- Configure all burst settings via console

Enhanced distribution, encryption & integration
- Tight integration with enterprise content management systems (Open Text, Sharepoint, etc.)
- API for custom destination plug-in creation
- Extensive support for destination/distribution types (SSL FTP, secure FTP, secure shell FTP, encrypted files)

APOS Systems Inc. is an SAP Partner focused on business intelligence and analytics solutions. APOS develops, sells and supports solutions that enhance and extend the capabilities of the SAP BusinessObjects and SAP Analytics Cloud platforms, delivering strong value to hundreds of customers globally. APOS solutions for SAP BusinessObjects address automated system administration and platform management, including security and schedule management, auditing and monitoring, archive and storage, publishing and distribution, content testing and migration. APOS solutions for SAP Analytics Cloud expand data connectivity options, and provide content bursting and distribution capabilities.

APOS Publisher for SAP Analytics Cloud

APOS also has a version of APOS Publisher designed specifically for use with SAP Analytics Cloud. It automates processes for **bursting** personalized SAP Analytics Cloud stories to end users. Dynamic, security driven processes with strict filters ensure users receive only the data to which they are entitled.

You can also use APOS Publisher for Cloud to automate **scheduling** and **export** operations, so you can send SAP Analytics Cloud stories to a variety of destinations in a variety of formats:

Destinations:
- Email
- FTP/FTPS
- File Location

Formats:
- PDF
- Excel
- HTML/MHTML
