The following set of recommendations is meant as a guideline. For best results, we encourage you to match your test hardware and setup to those of your production environment.

Enviroment Requirements

Server Installation

Operating System: Windows Server 2008/2012/2016 or Windows Client 7/8/10

Architecture: 64-bit only

Memory: 16GB RAM

Processor: Dual core minimum

Software:

- Microsoft .NET Framework 4.6.1

- The machine this product will be installed on, needs to be able to communicate with SAP Analytics Cloud

- 64bit Microsoft Office (Excel, Word and Powerpoint)

- Adobe Reader

- Visual C++ Redistributable for Visual Studio 2017 (x64)

The file vcredist_x64.exe has been included in the setup for your convenience to install. It can be found in the installed folder: …\Program Files\APOS\Publisher for Cloud\Bursting Manager for Cloud

- The setup will supply a version of SQL 2012 Express that will be installed with the below configuration. These configuration settings are a requirement of the Bursting Manager for Cloud application and cannot be changed.

> Instance Name: APOSBMCLOUD
>
> Database Name: APOSBurstingCloud
>
> DB User: APOS
>
> DB Password: Ap0s!234!

For information on how to configure, setup, and test APOS Publisher for Cloud please refer to the "Help File" that came with the download.
