APOS Publisher for Cloud

Automate Processes for Bursting Personalized SAP Analytics Cloud Stories

Flexible Distribution & Content Export

APOS Publisher allows users to export stories from SAP Analytics Cloud. Burst stories in a neutral format such as PDF, enabling a long-term document of record.

- **Multi-Filter Story Bursting**

Use the same page within an SAP Analytics Cloud story multiple times with different filters to personalize content for users and groups.

- **Story Collation**

Burst pages from multiple stories as a single document.

- **Email Embedded Image Distribution**

Embed images of pages from your story into the body of email messages.

- **Customized HTML Email Bursting**

Full control of email message formatting, including dynamically generated links.

- **Secure Distribution**

Use encryption and password protection on PDF & Office documents.

- **Multi Option Distribution**

Send multiple formats within a single distribution.

- **Data Extraction to Excel**

Support for downloading large tables/grids to Excel.

- **Personalized PowerPoint Bursting**

Use custom templates for bursting PowerPoint presentations

Secure Bursting complements the online experience of SAC

Secure bursting and distribution allow you to serve expanded needs of distinct users who benefit from having content pushed directly to them to simplify access and consumption of SAP Analytics Cloud content. Bursting also provides a means of serving information to casual users without having to define security within SAP Analytics Cloud for those users. APOS Publisher provides targeted bursting, filtering the data in stories to support the needs of these casual users, as well as to support your security requirements.

APOS Systems Inc. is an SAP Partner focused on business intelligence and analytics solutions. APOS develops, sells and supports solutions that enhance and extend the capabilities of the SAP BusinessObjects and SAP Analytics Cloud platforms, delivering strong value to hundreds of customers globally. APOS solutions for SAP BusinessObjects address automated system administration and platform management, including security and schedule management, auditing and monitoring, archive and storage, publishing and distribution, content testing and migration. APOS solutions for SAP Analytics Cloud expand data connectivity options, and provide content bursting and distribution capabilities.
