

Well Managed BI

BI Platform Management

The key to well managed BI is robust platform management – moving beyond the merely reactive, repetitive and labor-intensive to achieve truly proactive and progressive BI platform management. Simplify, automate, enhance and extend your SAP BusinessObjects deployment with APOS BI platform management solutions.

Administrator

Automated administration and system management

Gain operational efficiencies and streamline platform management, maintenance and migration processes. Optimize content management, user and infrastructure processes. Automate repetitive administrative tasks and use bulk operations to reduce human error and liberate highly skilled IT resources for high-ROI activities. React quickly and decisively to unplanned system interruptions.

Insight

System metrics, impact analysis, and performance analytics

Streamline processes for monitoring and sustaining infrastructure and content reliability. Optimize your BI platform for maximum availability and accuracy, and minimal downtime. Leverage Insight's deep introspection, predictive monitoring and failure prevention capabilities to achieve superior system tuning and optimization. Improve system governance using enhanced metadata auditing and monitoring. Simplify migration through auditing and system snapshots and status comparisons. Perform in-depth change impact analysis using content structure metadata. Automate corrective actions for system services/processes.

IDAC – Intelligent Data Access Controller

Monitor, manage, and audit BI data connectivity

The multi-threaded Intelligent Data Access Controller (IDAC) logs BI query metadata to achieve tight integration between SAP BusinessObjects and numerous datasources. IDAC lets you know who is doing what, where and when. You can actively monitor queries and cancel remotely. You can set up automatic monitoring and query cancellation based on thresholds. Teradata users can use IDAC to leverage Query Banding and temporal datatypes and functions to realize the full benefits of Teradata Dynamic Workflow Management with SAP BusinessObjects.

Storage Center

Archive, backup and selective restore of system content

Achieve your system performance, disaster recovery, and regulatory compliance objectives in a single solution. Maintain long-term content integrity through industry-standard formats. Automate backup and versioning of report content, and selectively restore content when needed.

Publisher

Advanced bursting, consolidation, assured delivery, complex statement processing

Execute tightly controlled document production, publishing, and distribution workflows. Advanced bursting, automated document production, workflow monitoring and alerts, interactive process control, assured delivery, and enhanced distribution and integration provide the scalability and flexibility you need to meet the most complex enterprise information consumer requirements.

Location Intelligence

Leverage and extend your well managed BI platform with enterprise location intelligence. Increase the impact of BI through geographic visualization. Extend the reach of GIS to include enterprise business intelligence. Combine BI and GIS to increase the ROI for both and deliver superior speed to insight.

Location Intelligence

Advanced location visualization in reports and dashboards

Expose the analytical power of geographic visualizations to information consumers. Contextual integration between mapping and Business Intelligence. Utilize thematic maps to better understand trends and patterns. Introduce spatial query and analysis to enhance decision-making processes.

Since its beginning in 1992, APOS Systems has evolved from a custom business application development shop to a global provider of solutions promoting well managed business intelligence. APOS solutions improve the return on your BI investment through:

BI platform management – automating and simplifying the administration, auditing and monitoring of your BI platform, providing robust document instance and object archive and restore capabilities, enabling tightly controlled document production, publishing and distribution workflows, and promoting agile BI practices;

Location intelligence – full bi-directional integration between business intelligence and geospatial data, improving comprehension and communication, and enhancing decision-making workflows through advanced data visualization.

APOS solutions simplify, automate, complement, enhance and extend BI practices, and focus BI processes for greater agility in your organization's decision-making capabilities.
