

APOS Storage Center

Archive, Backup and Selective Restore

- **Privacy** – Maintain privacy requirements for documents of record
- **Security** – Maintain administrative, physical, and technical security safeguards required for regulatory compliance
- **Audit** – Comply with policies, procedures and technology in alignment with legislated standards

APOS Storage Center automates the archive and restore functions in your SAP BusinessObjects deployment, helping you to manage the document lifecycle, safeguard data privacy, and achieve regulatory compliance.

It features automatic backup, partial restoration of selected documents and report objects to a location of your choice, and versioning. Storage Center also provides both online and offline storage, letting you balance disk space, performance and audit requirements, and its extract and export features make it an essential tool for migrating instances between BusinessObjects deployments. Storage Center should be a key ingredient in any BusinessObjects disaster recovery plan.

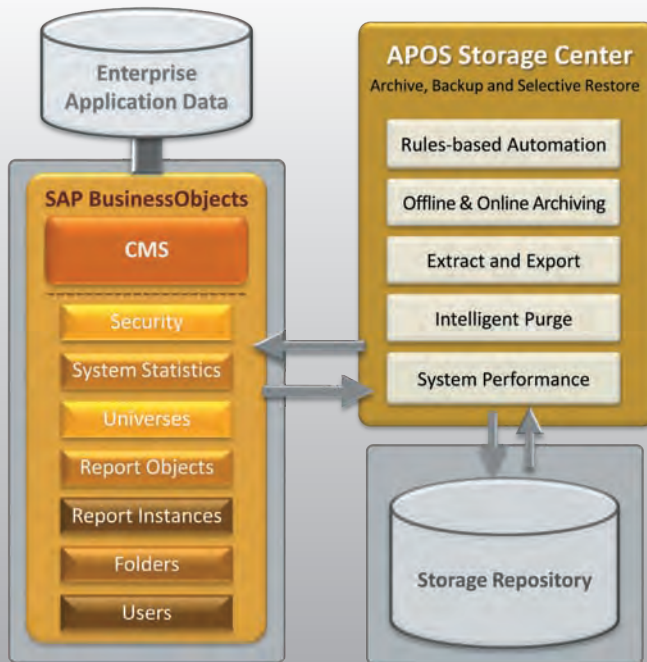

Well Managed BI

APOS Storage Center

Archive, Backup and Selective Restore

Component Architecture Diagram

APOS Storage Center provides the following critical capabilities for SAP BusinessObjects:

- **Rules-based backup, archive, versioning, selective restore** - Storage Center provides rules-based backup, archive, versioning and restore, letting you automate the backup process and restore selected documents of record to a location of your choice in order to both facilitate and limit auditor access.
- **Offline and online archiving** - Storage Center enables both online and offline archive strategies. Online storage maintains documents of record within the SAP BusinessObjects system while hiding them from queries to improve processing. Offline storage maintains document instance integrity outside the SAP BusinessObjects system.
- **Extract and export** - Storage Center's extract and export features maintain document of record integrity for the migration process. The ability to export to other formats is crucial, because changes in the environment can make it impossible to restore the original document instance. Storage Center allows administrators to restore the original, the exported version, or both.
- **Versioning, purging, retrieving Web Intelligence reports** - In organizations that make extensive use of Web Intelligence reports, the versioning provided by Storage Center is invaluable, because "Webi" reports can be changed easily by users. Storage Center provides an intelligent means to purge Webis while retaining retrievable versions, and enabling regulatory compliance.
- **System performance improvements** - Storage Center limits the number of document instances the system has to search through archiving (either online or offline), improving response times.

Since its beginning in 1992, APOS Systems has evolved from a custom business application development shop to a global provider of solutions promoting well managed business intelligence. APOS solutions improve your return on your BI investment through:

BI platform management – automating and simplifying the administration, auditing and monitoring of your BI platform, providing robust document instance and object archive and restore capabilities, enabling tightly controlled document production, publishing and distribution workflows, and promoting agile BI practices.

Location intelligence – full bi-directional integration between business intelligence and geospatial data, improving comprehension and communication, and enhancing decision-making workflows through advanced data visualization.

APOS solutions simplify, automate, complement, enhance and extend BI practices, and focus BI processes for greater agility in your organization's decision-making capabilities.
