

APOS Storage Center Integrates with KOMpliance

Strengthen Data Security by Extending Compliant WORM HD Storage for SAP® BusinessObjects™

Kitchener & Ottawa, Ontario, Canada – April 2, 2013 – APOS Systems Inc., a leading provider of well managed business intelligence (BI) solutions for SAP® BusinessObjects™, and KOM Networks, a leading provider of storage management solutions for compliant data protection and retention, announced today the integration of [APOS Storage Center](#), a secure archive and restore solution for SAP® BusinessObjects™ with [KOMpliance™](#), a tamperproof vendor-neutral, secure storage solution. Deployed together KOM and APOS provide optimal protection of SAP data throughout its lifecycle and enable customers to improve system performance, maximize storage efficiency, and address long-term storage and regulatory compliance requirements.

KOM Networks and APOS Systems developed a tightly integrated secure solution that simplifies deployment and ensures data security and compliance. APOS Storage Center automates SAP® BusinessObjects™ archive, restore and migration processes allowing rules-based management of the document lifecycle while maintaining document integrity. KOMpliance patented technologies create secure WORM storage volumes using any HDD or SSD storage infrastructure enforcing data-at-rest security, data retention, authorized access and data integrity.

The integration with KOMpliance offers customers end-to-end data protection, assured integrity, complete privacy and fast authorized access to critical data assets to assist well managed BI while meeting the strictest [regulatory compliance](#) requirements for data protection and retention. The flexible nature of a KOMpliance secure storage solution in combination with the features of APOS Storage Center eliminates data migration headaches and future-proofs access to archived SAP® BusinessObjects data when environments change.

This integrated platform offers customers the most flexible compliant solution available, enabling them to manage any data, address any regulation and use any storage technology.

“Our integrated solutions reduce the complexity and cost of regulatory compliance by simplifying the management and protection of SAP data through its entire lifecycle”, said Kamel Shaath, CTO, KOM Networks. “Together we can help organizations manage and archive their information, speed migration and upgrades, improve data protection and application performance and fully address compliance requirements.”

"The integration of these two products provides a robust and convenient backup and archiving solution for SAP BusinessObjects," said Allan Pym, COO of APOS Systems. "As regulatory compliance ramps up globally, this solution will be welcome news for business intelligence platform managers seeking to safeguard their documents of record and taking a proactive approach to compliance."

About APOS Systems

Since its beginning in 1992, APOS Systems has evolved from a custom business application development shop to a global provider of solutions promoting well managed business intelligence. APOS focuses on providing BI Platform Management and Location Intelligence solutions that improve the return on your BI investment. APOS solutions simplify, automate, complement, enhance and extend BI practices, and focus BI processes for greater agility in your organization's decision-making capabilities.
